Experience

Front-end Engineer & Devops @ Dispatch
April 2016 - Present

Migrated legacy Meteor app using ReactJS and Redux with reusable component architecture. Contributed to Kitchen Sink open source project that allows isolated development of ReactJS components.
Worked on dispatch CLI tool to build, deploy and run apps using Docker images to Rancher.

Front-end Engineer & UI/UX @ Intuit
June 2015 - December 2015

Used AngularJS and NodeJS to create a microservice web application for AWS deployment solutions on developer operations team.
Released Continuous Deployment Dashboard 2.0, a one-click tool to create and manage Jenkins deployments.

Front-end Engineer & Design @ Attend.com
April 2014 - September 2014

Worked closely with the core team for development and design of web pages using jQuery and Bootstrap.
Communicated with marketing team to generate 45% increase in impressions and boosted social media presence.

Education & Awards

Northeastern University
B.S. Computer Engineering & Science
